

# Slip 1

## NEXT GENERATION TECHNOLOGIES

Seat No. : \_\_\_\_\_

Max. Marks:50

1.	(A) Import Restaurant.json into MongoDb and perform the following queries 1. Write a MongoDB query to display all the documents in the collection restaurants. 2. Write a MongoDB query to display the fields , restaurant_id, name, borough and cuisine for all the documents in the collection restaurant. 3. Write a MongoDB query to display the fields restaurant_id, name, borough and cuisine, but exclude the field _id for all the documents in the collection restaurant 4. Write a MongoDB query to display the fields restaurant_id, name, borough and zip code, but exclude the field _id for all the documents in the collection restaurant 5. Write a MongoDB query to display all the restaurant which is in the borough Bronx  (B) Connect Python with MongoDB and also insert and retrieve documents.	20
2.	(A) Write a jQuery to animate multiple CSS properties. (B) Write a jQuery effect method with a callback function.	20
3.	Viva	5
4.	Journal	5

## Solution

1.A)

1.

Code:

```
Administrator: Command Prompt - mongo
2021-10-06T18:38:31.208+0530 I CONTROL [initandlist
> show dbs
Studtalks    0.000GB
Team          0.000GB
TeamStuds    0.000GB
admin         0.000GB
config        0.000GB
employee      0.000GB
local         0.000GB
mydb          0.000GB
> use restaurants
switched to db restaurants
> db.createCollection("rest")
{ "ok" : 1 }
> db.rest.find()
> db.rest.find()
```

Again open the command prompt to import the restaurant.json file

db.rest.find().pretty()

Output:

```
C:\ Administrator: Command Prompt - mongo
>
>
> db.rest.find().pretty()
{
    "_id" : ObjectId("615daa77e08938d0729aa208"),
    "address" : {
        "building" : "351",
        "coord" : [
            -73.98513559999999,
            40.7676919
        ],
        "street" : "West 57 Street",
        "zipcode" : "10019"
    },
    "borough" : "Manhattan",
    "cuisine" : "Irish",
    "grades" : [
        {
            "date" : ISODate("2014-09-06T00:00:00Z"),
            "grade" : "A",
            "score" : 2
        },
        {
            "date" : ISODate("2013-07-22T00:00:00Z"),
            "grade" : "A",
            "score" : 11
        },
        {
            "date" : ISODate("2012-07-31T00:00:00Z"),
            "grade" : "A",
            "score" : 12
        },
        {
            "date" : ISODate("2011-12-29T00:00:00Z"),
            "grade" : "A",
            "score" : 12
        }
    ],
}
```

2:

Code:

```
db.rest.find( {}, { "restaurant_id": 1, "name": 1, "borough": 1, "cuisine": 1 } ).pretty()
```

Output:

```
ct1 Select Administrator: Command Prompt - mongo
        "restaurant_id" : "40361618"
}
Type "it" for more
> db.rest.find({ }, {"restaurant_id":1,"name":1,"borough":1,"cusinie":1}).pretty()

        }
    ]
}
```

B)

Insert

Code:

```
from pymongo import MongoClient
client=MongoClient('localhost',27017)
db=client.Studtalks
def insert():
    try:
        Name=input("Enter Name : ")
        Age=input("Enter Age : ")
        Dept=input("Department : ")
        Contro=input("Contributed for : ")
        db.Teachers.insert(
            {
                "NAME":Name,
                "AGE":Age,
                "Deptname":Dept,
                "ControTo":Contro
            }
        )
        print("Inserted data successfully ")
    except Exception:
        print(str(e))
insert()

Output:
```

```
Administrator: Command Prompt - mongo
>
>
> show dbs

Code:

Collper\_1.html

```
<!DOCTYPE html>
<html>
<head>
</head>
<body>
    <h2>Get data as JSON from a PHP file on the server</h2>
    <p>The JSON received from the PHP file</p>
    <p id="demo"></p>
    <script>
        var obj,dbParam,xmlhttp;
        obj={"Name":"Json1","Roll":"1234","password":"5678","pincode":
        "421308"};
        dbParam=JSON.stringify(obj);
        xmlhttp=new XMLHttpRequest();
        xmlhttp.onreadystatechange=function()
        {
            if(this.readyState==4 && this.status==200)
            {
                document.getElementById("demo").innerHTML=this.responseText;
            }
        };
    </script>
</body>
</html>
```

```
 xmlhttp.open("GET","collpersistence_1.php?x="+dbParam,true);
 xmlhttp.send();

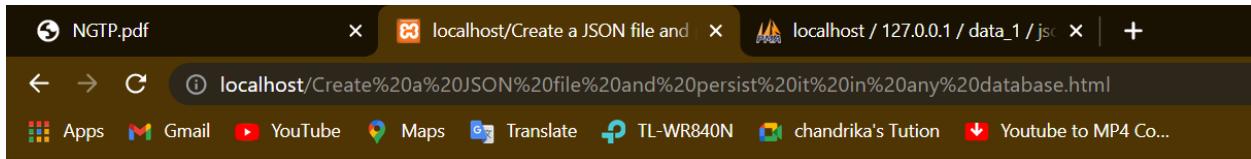

</script>
</body>
</html>
```

collpersistence\_1.php

```
<?php
header("Content-Type:application/json;charset=UTF-8");
$obj=json_decode($_GET["x"],false);
$a=$obj->Name;
$b=$obj->Roll;
$c=$obj->password;
$d=$obj->pincode;
$con=mysql_connect("localhost","root","");
if($con)
{
    echo "connected";

}
$db=mysql_select_db("data_1",$con);
if($db)
{
    echo "connected";
}
$sql="insert into json_1(Name,Roll,password,pincode) values('$a','$b'
,'$c','$d')";
$z=mysql_query($sql,$con);
echo json_encode($obj);
?>
```

## Output:

### Get data as JSON from a PHP file on the server

The JSON received from the PHP file

```
connectedconnected["Name":"Json1","Roll":"1234","Password":"5678","Pincode":"421308"]
```

The screenshot shows the phpMyAdmin interface. On the left, there is a sidebar with a tree view of databases: 'New', 'data\_1', 'information\_schema', 'json', 'mysql', 'performance\_schema', 'phpmyadmin', and 'test'. The 'data\_1' database is selected. In the main area, the 'Table: json\_1' is selected. At the top, there are several tabs: 'Browse', 'Structure', 'SQL', 'Search', 'Insert', 'Export', 'Import', 'Privileges', 'Operations', and 'More'. Below the tabs, a SQL query 'SELECT \* FROM `json\_1`' is shown. To the right of the query, there are buttons for 'Profiling', 'Edit inline', 'Edit', 'Explain SQL', 'Create PHP code', and 'Refresh'. Below the query, there are filters for 'Show all', 'Number of rows: 25', and a search bar 'Filter rows: Search this table'. The main content area displays the data in the 'json\_1' table:

Name	Roll	Password	Pincode
Json1	1234	5678	421308
Json1	1234	5678	421308
Json1	1234	5678	421308
Json1	1234	5678	421308
Json1	1234	5678	421308
Json1	1234	0	0
Json1	1234	5678	421308

> use tymongo
switched to db tymongo
> db.rest.find()
>
```

## How to backup

To backup type mongorestore

```
C:\WINDOWS\system32>mongorestore
2021-10-06T02:03:58.168+0530      using default 'dump' directory
2021-10-06T02:03:58.171+0530      preparing collections to restore from
2021-10-06T02:03:58.181+0530      reading metadata for tymongo.rest from dump\tymongo\rest.metadata.json
2021-10-06T02:03:58.183+0530      reading metadata for EMPLOYEE.students from dump\EMPLOYEE\students.metadata.json
2021-10-06T02:03:58.184+0530      restoring EMPLOYEE.students from dump\EMPLOYEE\students.bson
2021-10-06T02:03:58.185+0530      reading metadata for EMPLOYEE.employee from dump\EMPLOYEE\employee.metadata.json

> db.rest.find()
{ "_id" : ObjectId("60f93080eeba95fc557b3117"), "address" : { "building" : "2780", "coord" : [ -73.9824199999999, 40.579508 ], "borough" : "Brooklyn", "cuisine" : "American", "grades" : [ { "date" : ISODate("2014-06-10T00:00:00Z"), "grade" : "A", "score" : 7 }, { "date" : ISODate("2012-04-13T00:00:00Z"), "grade" : "A", "score" : 12 }, { "date" : ISODate("2013-06-05T00:00:00Z"), "grade" : "A", "score" : 12 } ], "name" : "Riviera Caterer", "restaurant_id" : "40356018" }
{ "_id" : ObjectId("60f93080eeba95fc557b3118"), "address" : { "building" : "1007", "coord" : [ -73.856077, 40.848447 ], "borough" : "Bronx", "cuisine" : "Bakery", "grades" : [ { "date" : ISODate("2014-03-03T00:00:00Z"), "grade" : "A", "score" : 10 }, { "date" : ISODate("2013-01-24T00:00:00Z"), "grade" : "A", "score" : 10 }, { "date" : ISODate("2014-03-03T00:00:00Z"), "grade" : "A", "score" : 10 } ], "name" : "Papa's Pizzeria", "restaurant_id" : "40356019" }
```

Now see all the files have restore

```
> show dbs
EMLOYEE      0.000GB
EMPLOYEE      0.000GB
TY            0.000GB
admin         0.000GB
config        0.000GB
local         0.000GB
tyit219716   0.000GB
tymongo       0.001GB
>
```

tymongo as restore

if you want to restore another database use have to switch the another database and type in another command prompt mongorestore like have done about the database TY

```
> use TY
switched to db TY
> show dbs
EMLOYEE    0.000GB
EMPLOYEE    0.000GB
TY          0.000GB
admin       0.000GB
config      0.000GB
local       0.000GB
tyit219716  0.000GB
tymongo     0.001GB
> use TY
switched to db TY
> show collections
phpdata
samp
st
> db.phpdata.find()
{ "_id" : ObjectId("615ca32966a195ec1d00002b"), "Name" : "Datta", "State" : "maharashtra", "Gender" : "Male", "title" : "Datta" }
>
```

2.A)

Code:

Slip no 1

B)

Code:

```
<!DOCTYPE html>
<html>

<head>
  <title></title>
  <script src="jquery-3.6.0.min.js"></script>
  <script>
    $(document).ready(
      function () {
        $("button").click(
          function () {
```

```
        document.write("hello world");
    }
);
}
);
</script>
</head>

<body>
<p>Hello! Welcome in Jquery Language!!</p>
<button>Click me</button>
</body>

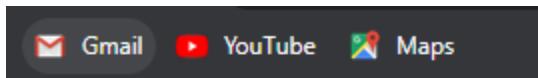

</html>
```

Output:

Hello! Welcome in Jquery Language!!

[Click me](#)

hello world

2021-10-06T02:46:16.442+0530 I CONTROL  [initandlisten] ** Read and write access to data and configuration files is unrestricted.
```

## Configuration

### On server 1

```
> config={  
... _id:"tyit",  
... members:[  
... {  
... _id:0, host:"localhost:27017"},  
... {  
... _id:1, host:"localhost:27018"},  
... {  
... _id:2, host:"localhost:27019"}  
... ]  
... }  
{  
    "_id" : "tyit",  
    "members" : [  
        {  
            "_id" : 0,  
            "host" : "localhost:27017"  
        },  
        {  
            "_id" : 1,  
            "host" : "localhost:27018"  
        },  
        {  
            "_id" : 2,  
            "host" : "localhost:27019"  
        }  
    ]  
}  
>
```

```
> rs.initiate(config)  
{  
    "ok" : 1,  
    "operationTime" : Timestamp(1633469520, 1),  
    "$clusterTime" : {  
        "clusterTime" : Timestamp(1633469520, 1),  
        "signature" : {  
            "hash" : BinData(0,"AAAAAAAAAAAAAAAAAAAAAAA="),  
            "keyId" : NumberLong(0)  
        }  
    }  
}  
tyit:OTHER>
```

## Server 2 and Server 3

```
> rs.slaveOk()  
tyit:SECONDARY>
```

```
> rs.slaveOk()  
2021-10-06T03:05:37.246+0530 E QUERY      [thread1] TypeError: rs.slave is undefined :  
@(shell):1:1  
tyit:SECONDARY> rs.slaveOk()  
tyit:SECONDARY>
```

## We have to insert the documents

```
tyit:OTHER> db.student.insert(  
... {  
...   "name": "Hello",  
...   "class": "ty"  
... }  
... )  
WriteResult({ "nInserted" : 1 })  
tyit:PRIMARY>
```

Now we will see the secondary server also have inserted the documents

## Server 2

```
tyit:SECONDARY> db.student.find().pretty()  
{  
    "_id" : ObjectId("615cc5efc3827f7a90f62789"),  
    "name" : "Hello",  
    "class" : "ty"  
}  
tyit:SECONDARY>
```

## Server 3:

```
tyit:SECONDARY> db.student.find().pretty()  
{  
    "_id" : ObjectId("615cc5efc3827f7a90f62789"),  
    "name" : "Hello",  
    "class" : "ty"  
}  
tyit:SECONDARY>
```

## Now we will delete

```
C:\WINDOWS\system32>mongodump  
2021-10-06T03:16:27.791+0530      writing admin.system.version to  
2021-10-06T03:16:27.797+0530      done dumping admin.system.version (1 document)  
2021-10-06T03:16:27.797+0530      writing test.student to  
2021-10-06T03:16:27.801+0530      done dumping test.student (1 document)  
  
C:\WINDOWS\system32>
```

the records and database

```
tyit:PRIMARY> db.dropDatabase()
{
    "dropped" : "test",
    "ok" : 1,
    "operationTime" : Timestamp(1633470452, 2),
    "$clusterTime" : {
        "clusterTime" : Timestamp(1633470452, 2),
        "signature" : {
            "hash" : BinData(0,"AAAAAAAAAAAAAAAAAAAAA="),
            "keyId" : NumberLong(0)
        }
    }
}
tyit:PRIMARY>
```

```
tyit:PRIMARY> show dbs
admin 0.000GB
config 0.000GB
local 0.000GB
tyit:PRIMARY>
```

All the record is deleted from the database and collections from primary and the secondary server

```
tyit:SECONDARY> db.student.find().pretty()
tyit:SECONDARY>
```

Now we will restore the database and collections

```
C:\WINDOWS\system32>mongorestore
2021-10-06T03:21:27.429+0530      using default 'dump' directory
2021-10-06T03:21:27.432+0530      preparing collections to restore from
2021-10-06T03:21:27.442+0530      reading metadata for tymongo.rest from dump
2021-10-06T03:21:27.443+0530      reading metadata for EMPLOYEE.employee from
2021-10-06T03:21:27.443+0530      reading metadata for EMPLOYEE.students from d
2021-10-06T03:21:27.444+0530      reading metadata for tyit219716.sampleColle
etadata.json
```

We have backup the collections

```
tyit:PRIMARY> db.student.find().pretty()
{
    "_id" : ObjectId("615cc5efc3827f7a90f62789"),
    "name" : "Hello",
    "class" : "ty"
}
tyit:PRIMARY>
```

```
tyit:SECONDARY> db.student.find().pretty()
{
    "_id" : ObjectId("615cc5efc3827f7a90f62789"),
    "name" : "Hello",
    "class" : "ty"
}
tyit:SECONDARY>
```

```
tyit:SECONDARY> db.student.find().pretty()
{
    "_id" : ObjectId("615cc5efc3827f7a90f62789"),
    "name" : "Hello",
    "class" : "ty"
}
tyit:SECONDARY>
```

2.A)

Code:

```
<!DOCTYPE html>

**UNIVERSITY OF MUMBAI**  
T.Y.B.Sc. (INFORMATION TECHNOLOGY) (Semester– V) (Practical) EXAMINATION  
SECOND HALF 2018  
**NEXT GENERATION TECHNOLOGIES**

Seat No. : \_\_\_\_\_

Max. Marks: 50

1.	Write a MongoDB query to create Replica of existing database. Also create the backup of existing database. Number of primary server must be one and secondary server must be 3.	20
2.	Create a JSON file and persist it in any database.	20
3.	Viva	5
4.	Journal	5

1.

Slip no 6

There was secondary server 2 only you have to create one extra server only all are the same

2.

Slip no 2

## Slip no 11

### NEXT GENERATION TECHNOLOGIES

Seat No. : \_\_\_\_\_

Max. Marks: 50

1.	(A) Import Restaurant.json into MongoDb and perform the following queries  1. Write a MongoDB query to find the restaurant Id, name, borough and cuisine for those restaurants which prepared dish except 'American' and 'Chinees' or restaurant's name begins with letter 'Wil' 2. Write a MongoDB query to find the restaurant Id, name, and grades for those restaurants which achieved a grade of "A" and scored 11 on an ISODate "2014- 08-11T00:00:00Z" among many of survey dates. 3. Write a MongoDB query to find the restaurant Id, name and grades for those restaurants where the 2nd element of grades array contains a grade of "A" and score 9 on an ISODate "2014-08-11T00:00:00Z" 4. Write a MongoDB query to find the restaurant Id, name, address and geographical location for those restaurants where 2nd element of coord array contains a value which is more than 42 and upto 52. 5. Write a MongoDB query to arrange the name of the restaurants in ascending order along with all the columns.  (B) Connect PHP with MongoDB and also insert and delete documents.	20
2.	Create a JSON file and persist it in any database.	20
3.	Viva	5
4.	Journal	5

1.A)

1.

Code:

```
db.rest.find( {$or: [ {name: /^Wil/}, {"$and": [ {"cuisine": {$ne : "American "}}, {"cuisine": {$ne :"Chinees"} } ]} ]} ,{"restaurant_id": 1,"name":1,"borough":1,"cuisine":1} ).pretty()
```

Output:

```
> db.rest.find( {$or: [ {name: /Wil/}, {"$and": [ {"cuisine" : {$ne :"American "}}, {"cuisine" : {$ne :"Chinees"} } ]} ],{"restaurant_id" : 1,"name":1,"borough":1,"cuisine" :1} ).pretty()
